

ENVIRONMENTAL RISK ALERT

Widespread Piping Failures Plague Underground Petroleum Storage Systems

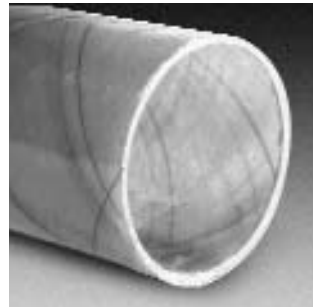

How much is at stake if your underground storage system suffers a release? Should the piping fail, how much will it cost to replace it and remediate the contaminated soil? How much of your revenue will be lost in the process? And what about your liability exposure?

If you haven't quantified these risks, it would be good to do so before specifying or accepting **failure-prone flexible piping** for your next project. A great many people are regretting having used it — and have learned a costly lesson about false economy.

The impartial facts speak for themselves. Find out more at www.smithfibercast.com/alert.

Problem Avoided: Our RED THREAD® IIA Fiberglass Piping Warranted for 30 Years*

To all but eliminate the possibility of a release and the myriad related risks, choose time-tested Smith Fibercast piping, proven since 1968 in underground petroleum service. We've never had a pipe removed for fuel incompatibility or corrosion, because we make our piping for a lifetime of fuel-handling peace of mind. A lesson in true economy. Warranted for 30 years.

* Contact Smith Fibercast for details of limited warranty.
